

# Digital Link Ethernet

## Secure and flexible

If you have multiple offices that need secure connection without interruption, Digital Link Ethernet is one solution. It'll connect your office local area networks and give you end-to-end control of your wide area network.

### Simple and flexible

Our Digital Link Ethernet is a large pipe that carries voice and data between your offices. You can connect in three ways, and we can help you select the best option for you:

- **Point-to-point** connects one site to one other site.
- **Point-to-multipoint** connects one site to several other sites.
- **Full mesh** connects each site to every other site. And if you're only connecting over short distances of up to 25km you can choose Digital Link Ethernet.
- **Cost-effective for short distances** if you're only connecting over short distances of up to 25km you can choose Digital Link Ethernet Local.

### Options to suit your business

We provide access connections at 10Mbps, 100Mbps and 1Gbps. Then, you choose the bandwidth you want to use, from 0.2Mbps to 1Gbps, and that's all you pay for. If you want to add bandwidth as your business needs change, we can do that for you – quickly and easily.

### Use as much, or as little, as you need

There are no usage charges and rental costs can be a fixed quarterly or monthly bill. Because our prices aren't based on distance, they're particularly good if you're connecting offices that are far apart.

### Supporting you

It's all backed by our 24/7 Anytime Support – even available over bank holidays.

## Why O<sub>2</sub>?

We keep it simple. So whether it's just your Digital Link Ethernet, or you have your fixed lines, mobiles and data with us, it's all on one bill. And with one number to call, you'll spend less time on admin and have more time for your business.

We work closely with you as a partner, guiding you through your voice and data needs as they change, keeping your business up to date and up to speed.

## And we'll support you all the way

You get one account team to support all your communications. They'll make sure everything is going the way you want it to. Your Account Manager will be your main contact, and will be there to oversee your day-to-day needs.

**Talk to your Account Manager to find out more or visit [o2.co.uk/business](http://o2.co.uk/business)**

## Why O<sub>2</sub> Digital Link Ethernet makes a difference

**66%** businesses say that managing multiple suppliers is a major challenge\*.

If you get all your voice, data and connection needs from us, that's only one supplier to deal with. One bill. And one point of contact.
