

# Delivering higher impact services with greater efficiency.

We're helping police forces embrace transformation and gain value from the shift towards digital. We can demonstrate the value of a modernised comms infrastructure and opportunities to realise cost savings. Already, we've delivered annual savings of £7m+ for 2 forces.

It's something we should talk about – how we can work together to create a platform that enhances your digital transformation.

## **O<sub>2</sub> Gateway – your foundation for digital transformation**

Our innovative, converged network, O<sub>2</sub> Gateway, delivers all our customers' digital and connectivity needs as a service that is simple to use.

# Time for a new way of working

A focus on establishing digitally enabled policing, improving productivity and encouraging flexible working is driving police forces to rethink how they operate. Combined with the need to manage tight budget, support frontline staff and improve contact with citizens, we are now at an inflection point.

Digitisation is changing everything. From the deployment of resources, case management, community engagement or flexible working. It's providing new opportunities to increase productivity, interact with people and make smarter use of limited resources. The end result: a more efficient, effective and better-connected police service that will continue to safeguard the public for years to come.

**With O<sub>2</sub> Gateway you can underpin your digital transformation and stay one step ahead.**

“

We worked together with O<sub>2</sub> to understand the different procurement options available to us. After O<sub>2</sub> outlined the benefits of speed, simplicity and cost savings that could be gained from using Standard Service Offers under the Network Services agreement, it was a no brainer. O<sub>2</sub> were able to develop a compliant SSO that fully met our requirements. Ultimately we were delivered a solution that we are very happy with and something which could be shared with others seeking the same services.

”

**Shane Baker, Mobile Policing Inspector, Surrey & Sussex Police**

# Introducing O<sub>2</sub> Gateway

As your technology partner, we can help transform how the right comms infrastructure empowers your business.

O<sub>2</sub> Gateway offers that single integrated connectivity platform, entirely owned and managed by O<sub>2</sub>, giving you converged access to multiple services with one point of contact and one SLA.

## What does this mean?

O<sub>2</sub> Gateway will seamlessly connect your sites and your people to all the services and business applications they need. Designed as one platform and built to be future-proof, so you can add new technologies and applications quickly, plus scale up and down at your own pace as your business demands. It offers the best platform for digital infrastructure – no other provider offers this with the same end-to-end capabilities or flexible pricing.

The combined effect on your business will be rapid improvements in your cost base, customer satisfaction and competitive advantage.

## An optimistic outlook

### Effective digital transformation addresses key challenges:

- Connected digital devices and systems help improve citizen interaction
- Data analytics tools enable the effective use of resources and preventative policing
- Smarter ways of working reduce the burden of case management, gathering digital evidence, creating a golden nominal view of information and implementing new policing models
- Equipping people with better tools to do their jobs empowers flexible working and attracts the right skillsets

# Your one-stop-shop for connectivity

Whether it is internet access or as a site-to-site corporate WAN transit, O<sub>2</sub> Gateway provides the connectivity for all your digital needs. Because O<sub>2</sub> Gateway is wholly owned end-to-end by O<sub>2</sub>, adding new digital services is simple and quick without having to wait for a legacy WAN provider to catch up.

## Improving everyday efficiency

When your people can communicate and collaborate without disruption, you can be more productive. O<sub>2</sub> Gateway optimises your infrastructure so your officers, support staff and citizens can interact with ease. It works seamlessly with 3G and 4G, so there's no need for messy VPNs. It also allows you to offer single-number services to your user groups, making it easier for them to contact you.

## Supporting the digital ecosystem in a global market

O<sub>2</sub> Gateway offers connectivity to the largest digital ecosystem in the market, allowing customers direct cloud connectivity to Amazon Web Servers, Microsoft Azure, O365, Google and Oracle cloud services. It seamlessly enables SIP, UC as a Service, private cloud and O<sub>2</sub> Wifi access. And through our Telefonica global reach, O<sub>2</sub> Gateway WAN connectivity can be extended to over 125 countries around the world.

### **Giving you greater agility**

Once connected to O<sub>2</sub> Gateway, you'll be able to roll out new or additional services quickly and scale bandwidth up or down. Changes like these are unlikely to disrupt the physical infrastructure, which means rapid deployment and faster adoption.

With integrated 4G and ready for 5G, O<sub>2</sub> Gateway also makes it easy to connect new sites to the corporate network faster than with traditional fixed infrastructure.

As well as a single, attractive commercial agreement, you can add services easily and reduce costs. If you have O<sub>2</sub> Wifi but want to add Skype for Business or MiCloud, we can just switch it on.

### **Offering a simple and secure experience**

Because O<sub>2</sub> Gateway is a converged platform, we have better control over services and user experience. If any problems arise, we'll sort them out rather than leave you to juggle multiple providers. One partner and one set of SLAs helps you deal with issues before they impact your bottom line.

O<sub>2</sub> Gateway also makes access to the corporate network much smoother. Remote workers on any devices get the same secure, direct connections as those at headquarters. All mobile devices are given private access points that keep data separate and secure from the internet.

We are the only business to gain the government's National Cyber Security Centre security certification, CAS(T) for both WAN and mobile services. CAS(T) certifies an enhanced level of security over ISO27001 including additional controls where conformity to the controls is mandatory and independently audited annually to provide peace of mind.

# Impact of O<sub>2</sub> Gateway

## In the boardroom

- Faster route to smarter working and digital transformation
- Better use of resources and more cost-effective projects
- Enhanced access for remote teams to corporate data through 3G and 4G
- Proven savings of millions

## For procurement

- Multiple services provided under a single SLA
- Easier way to allocate resources
- Simplified contract information for easier internal decision-making
- Reduced costs from flexible commercial options

## On-site

- Easy access to full corporate network from any site
- Seamless collaboration for managing complex projects
- No hassle to add new sites onto the network
- Fewer errors and less time on the job

## For IT

- Simpler network and user access management
- Faster provisioning of new services (days not months)
- Consistent user experiences across the network
- Peace of mind at network, connection and endpoint level
- Dedicated access from your corporate network to public cloud providers where other services, databases or systems are hosted

O<sub>2</sub> is on a mission to be **“the best provider of integrated digital services in the UK”** based on three key pillars: creating a platform for a digital economy; providing service excellence, whilst being underpinned by brilliant digital experiences.

# Next steps

Let's meet to review your connectivity requirements and where you could see the biggest impact from O<sub>2</sub> Gateway. We can speak first to discuss the most appropriate attendees, agenda and timeline for a meeting.

## And here's how you can benefit:

- O<sub>2</sub> Gateway is the UK's first truly converged, ubiquitous communications network recognised at the Computer Vendor Excellence Awards in 2016 with the 'Networking Infrastructure' award.
- It gives your operation a proven blueprint for digital transformation, so you can:
  - » make the shift to a digitally enabled police force,
  - » work smarter and make decisions faster,
  - » ensure officers are visible and responsive,
  - » enable support staff to work from more cost-effective locations,
  - » benefit from potential costs savings of £20 million over 3 years, and
  - » rest assured security is built in as we're the only provider to achieve CAS(T) security certification for mobile and wide area network (WAN) infrastructures.
- It unifies multiple communication and collaboration tools so your people can work securely and without interruption.
- It offers all of this through one contract, one supplier and one network.
- **On an award winning network** – and we want to keep it that way. That's why we continue to invest significantly in our network, as uSwitch recognised when we won Best Network Coverage in the uSwitch Mobile Awards 2018. And Ofcom has confirmed that we've delivered on our licence obligation to provide 98% indoor coverage for 4G. Our commitment to invest significantly in our network will help us further strengthen the experience for our customers through improved coverage, more reliability and increased capacity.
